

Armidale Animal Breeding
Summer Course
2003

part 2

Models and Methods for Genetic Analysis

Julius van der Werf

University of New England

and

Mike Goddard

*University of Melbourne and Victorian Institute of
Animal Science*

Contents

Introduction to Mixed Models <i>Julius van der Werf</i>	1
Mixed Models for Genetic Analysis <i>Julius van der Werf</i>	47
Genetic Properties of the Animal Model <i>Julius van der Werf</i>	75
Estimation of Genetic Parameters <i>Julius van der Werf</i>	109
Introduction to Bayesian Statistics <i>Mike Goddard</i>	135

Acknowledgement:

JW acknowledges contributions of former AGBU students (mainly Michael Bradfield) who prepared notes on Linear Models. These notes were mainly based on notes written by Larry Schaeffer and Brian Kennedy from The University of Guelph, Canada.
Furthermore, JW acknowledges Sanghong Lee for summarizing the theory on the AI REML algorithm.

We are thankful to Australian Wool Innovation pty.ltd for sponsoring this course and to Meat and Livestock Australia and Australian Wool Innovation pty.ltd for providing travel scholarships for students.
